# 1. Introduction

The Taoglas MGS.8010 is a robust rubber gasket mount, designed to be mounted on the roof ribs of the Ford Explorer, ensuring a secure and weather-tight seal. With a unique design, when mounted on the Ford Explorer's roof ribs, the rubber gasket accommodates the 59mm rib and maintains a height of less than 80mm, which is essential to ensure the seamless integration of the Raptor X Series Antennas while maintaining the vehicle's functionality, aesthetics, and weather resistance.

Main benefits:

- **Compatibility:** The gasket must be compatible with the Raptor X Series.
- **Roof Rib Fitment:** The gasket must be designed to fit precisely over the 59mm roof rib.
- **Sealing Properties:** The gasket creates an effective seal between the Raptor X Series Antennas and the vehicle's roof.
- **Easy Installation:** The design facilitates straightforward installation, allowing for efficient mounting on the roof ribs.
